

UNIVERSITY OF TORONTO'S FORESTS AND TREES

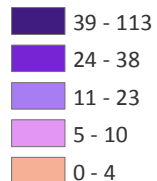

CARBON SEQUESTERED AT U OF T INSTITUTE FOR AEROSPACE STUDIES (UTIAS)

Carbon sequestration for single trees at UTIAS was extrapolated using average carbon sequestration per canopy area values derived using i-Tree ECO software based on tree species and diameter at breast height (DBH) of Neighbourwoods© tree monitoring data. Carbon sequestration for woodlands at UTIAS was generated using average carbon sequestration per woodland area values derived based on forest successional stage using Vegetation Sampling Protocol (VSP) natural areas field data from southern Ontario.

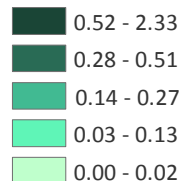

Single Tree Canopy

Carbon Sequestration (kg/year)

Woodland Area

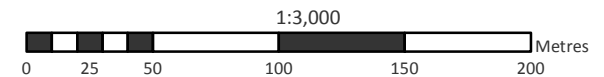

Carbon Sequestration (Mg/year)

UTIAS Property

Total Carbon Sequestered:
6.94 Mg/year

North American Datum 1983
Universal Transverse Mercator
Zone 17N
