

UNIVERSITY OF TORONTO'S FORESTS AND TREES

CARBON STORED AT HART HOUSE FARM

Carbon storage for single trees at Hart House Farm was extrapolated using average carbon storage per canopy area values derived using i-Tree ECO software based on tree species and diameter at breast height (DBH) of Neighborwoods© tree monitoring data. Carbon storage for woodlands at Hart House Farm was generated using average carbon storage per woodland area values derived based on forest successional stage using Vegetation Sampling Protocol (VSP) natural areas field data from southern Ontario.

Single Tree Canopy

Carbon Stored (kg)

Woodland Area

Carbon Stored (Mg)

 Hart House Farm Property

Total Carbon Stored: 4,342.98 Mg

North American Datum 1983
Universal Transverse Mercator
Zone 17N
